

FastCAM® EdgeSmart™

‘LESS PLATE, LESS PIERCING’

PATENTED TECHNOLOGY

EdgeSmart is a patented cutting feature in the FastCAM® Professional v7 edition, where the entry point for a part is pre-cut in an adjacent part as a small rectangle. This pre-cut rectangle allows the next pierce to be taken from the edge of the plate, thus greatly reducing heat/pierce time and also allowing for closer placement of parts together which can also dramatically increase material utilization.
